

SUDOKU CRUDE OIL

NAME _____

The gasoline and natural gas that we use as fuel today began forming millions of years ago from the remains of marine animals and plants that lived before the dinosaur age. Over the years, layers of dirt covered these dead animals and plants, making a pressure and heat cooker that turned this

organic—or living matter—into **crude oil**. Crude oil is an important raw material. Gasoline used to power cars and natural gas used to heat homes are just two of the many things we use today that begin as crude oil.

Fill in the squares so that each row, column, and 9-square section has the letters C-R-U-D-E-O-I-L. The final square will contain a picture of an oil drilling rig.
